LEGENDplex™ Cytokine Storm Panels

Our two new LEGENDplex™ panels cover 27 inflammatory cytokines associated with SARS-CoV-2 disease severity, including IFNs, IL-1β, IL-6, and CXCL8.

TotalSeq™ Multiomics Analysis Software (MAS)

MAS is now available for single-cell CITE-seq analysis. It's free, cloud-based, and doesn't require an in-depth bioinformatics background to navigate.

Flow Cytometry Tools

From panel builders to spectra analyzers, our webpage houses diverse web tools, ensuring you're fully prepared for your multicolor flow experiments.

SARS-CoV-2 Poster

Our SARS-CoV-2 Poster highlights mechanisms associated with the virus and the ways our reagents can dismantle it. Request your complimentary copy today.

Product Type	Application	Research Area
Primary Antibodies	Flow Cytometry	Immunology
Secondary Reagents	Fluorophore Families	Stem Cells
Apoptosis Detection - Apotracker™	TotalSeq™	Oncology
Buffers and Solutions	Biomarkers and Immunoassays	Proteogenomics
Diagnostic Analyte Specific Reagents	ELISAs	Neuroscience
Isotype Controls	LEGENDplex™	Diagnostic
Live/Dead Cell Discrimination - Zombie Dyes	Western Blot	
Magnetic Cell Separation - MojoSort™	IP	
Non-Human Primate Antibodies	ChIP	
Recombinant Proteins, Cytokines, Growth Factors	Microscopy	
SARS-CoV-2 Reagents	Functional Assays	
Soluble MHC - Flex-T™	CyTOF®	
Ultra-LEAF™ GoInVivo™ Antibodies
