DNA-Dye NonTox

Loading Buffer with sensitive DNA-Dye NonTox
Ethidium bromide substitute

DNA-Dye NonTox is a non-toxic fluorescent reagent supplied in loading buffer. DNA-Dye NonTox is a highly sensitive stain for the detection of double-stranded DNA (dsDNA). The dye produces instant visualization of DNA bands on gels upon blue light or UV illumination. Supplied in 6X DNA Loading Buffer, DNA-Dye NonTox is used to prepare DNA markers and samples for loading on agarose or polyacrylamide gels. DNA-Dye NonTox is ideal in terms of environmental safety requiring a nonhazardous alternative to Ethidium bromide.

Agarose gel electrophoresis of DNA stained with DNA-Dye NonTox. DNA marker (M) and samples (1 - 6) were stained with DNA-Dye NonTox, separated by agarose gel electrophoresis and subsequently detected under UV light.

Tritidy G™

Ready-to-use solution for the simultaneous isolation of RNA, DNA and proteins.

TRItidy G™ is a monophasic reagent, based on the Chomczynski method, with additional modifications to improve the purity of the RNA, DNA and proteins. First, the RNA is selectively retained in the aqueous phase during the acidic extraction, while DNA and proteins stay in the organic phase and interphase, respectively. The DNA is isolated from the interphase/organic phase by a simple ethanol precipitation and proteins from the remaining organic phase.

Biological buffers

Biochemical processes are markedly impaired even by small pH changes. Therefore, it is usually required to stabilize the pH value in vitro without affecting the system's functioning by using buffered systems (e.g. Tris, HEPES, MOPS, PBS etc.).

Find below PanReac AppliChem branded biological buffers which are suited for your biological / biochemical / biotechnological applications in your laboratory, pilot plant or industry.
